EXPERIENCES

• **SmartPay**

Data Analytics Engineer

HCMC, Viet nam

Sep.2025–Jan.2026

– Responsibilities:

- Built a **scheduled data pipeline** using Airflow to **collect and clean issue data from the Jira API**, loading it into PostgreSQL. Developed **Metabase dashboards** to monitor issue trends, resolution time, and SLA performance, and collaborated with Product teams, Customer Support, and Sales teams to define KPIs and support operational and business reporting.
- Built **user tracking dashboards for SmartSME by VPBank** by collecting and consolidating behavioral data across OD, Card, and Loan applications. Collaborated closely with Product, Sales, Development teams to monitor user journeys, identify drop-off points, and track registration volumes for product optimization.

– **Technologies:** PostgreSQL, Apache Airflow, Metabase, MongoDB, Jira, Kafka

• **HQSOFT–Distribution and Retail Solution Expert**

Data Engineer

HCMC, Viet nam

Jul.2025–Sep.2025

– Responsibilities:

- Implemented end-to-end ETL pipelines in Microsoft Fabric Data Factory, orchestrating ingestion, transformation, and loading of data from **DMS and Excel/CSV** sources into the Fabric Lakehouse.
- Automated batch initialization by generating Batch ID and Business Date for traceability and auditing.
- Implemented data transformation workflows to process data from **Bronze – Silver – Gold layers** using notebooks.
- Built and maintained semantic models for analytics and reporting
- Designed and developed Power BI dashboards based on business requirements.

– **Technologies:** SQL Server, Apache Spark, Microsoft Fabric, PowerBI

• **International Trade Council**

Data Engineer

HCMC, Viet nam

Jul.2024–Dec.2024

– Responsibilities:

- Built scalable ETL pipelines with Apache Spark and Apache Airflow to process **hundreds of thousands to over a million records** per batch from diverse sources, loading clean data into the enterprise data warehouse.
- Analyzed, cleaned, explored, and mapped data into the system's schema using PySpark.
- Implemented a Bronze–Silver–Gold data architecture for structured, incremental data refinement.
- Developed **reusable Python modules** and parameterized Airflow DAGs to automate data crawling.
- Crawled **over 10 million records** from diverse web sources for the company's data platform.

– **Technologies:** Selenium, MySQL, PostgreSQL, BeautifulSoup, Apache Airflow, Git, Apache Spark, Docker, Minio

EDUCATION

SGU–Saigon University

2021–2026

Bachelor of Engineering Information Technology

- **Relevant Coursework:** Databases, Database Management Systems, Data Structures and Algorithms, Database Modeling,...
- **English:** TOEIC 660

SKILLS

- **Programming :** Python, Java, SQL
- **Data Analyst :** Seaborn , Pandas , Matplotlib, Tableau, Metabase
- **Database Management Systems :** MySQL Workbench, PgAdmin4
- **DataOps skills:** Docker, Git
- **Web Scraping:** Scraping Data (Requests, Selenium)
- **Data Engineering:** Dagster, Apache Spark, Apache Airflow ,MicrosoftFabric, S3
- **Data Modeling:** Dimensional Modeling, Normalization, Fact & Dimension Design
- **Cloud Technologies:** AWS (S3, Glue, Athena, Lambda, Step Functions)

PROJECTS

- **Spotify Data Pipeline & Analysis** | *Airflow, Docker, MongoDB, Hadoop, Spark, Tableau, Trino* **Mar–May 2025**
 - **GitHub Project** : <https://github.com/GiaPhus/Spotify-Data-Pipeline-Analytics>
 - **Responsibilities:** Designed and implemented an end-to-end data pipeline to automate data ingestion from the Spotify API using Airflow. Collected over 200,000 records and stored them in MongoDB. Processed and transformed the data with Hadoop and Spark, then loaded it into HDFS. Queried the data using Trino and created interactive Tableau dashboards to analyze song trends, popularity, and user engagement metrics.
- **Pandemic ETL Analysis** | *Dagster,Minio,Plotly,Docker,MYSQL,PostgreSQL,Spark,Plotly,Dash* **Sep – Oct. 2023**
 - **GitHub Project** : <https://github.com/GiaPhus/Pandemic-Data-ETL>
 - **Responsibilities:** Building ETL pipelines for batch processing with Apache Spark. Containerized the application with Docker and orchestrated assets using Dagster DAGs.Built an interactive dashboard with Plotly and Dash to visualize global Covid-19 death trends, recoveries, and confirmed cases by region.
- **Recovered Health Website** **Jun–Jul. 2024**
BackendDeveloper (<https://recoveredhealth.com/>) *Freelance*
 - **Responsibilities:** Completed website development using the Laravel framework, focusing on building robust and scalable features. Enhanced the UI to improve user experience and engagement. Developed and maintained APIs to ensure smooth integration with the database. Employed Playwright to automate data extraction from the website, enabling accurate and timely data collection for analysis and reporting.
 - **Technologies:** Laravel,PhpMyAdmin,MySQL,NodeJS,Playwright,HTML,CSS
